

## **BRASS CHIP POTS CARE INSTRUCTIONS**

The colour on the external surface of the pot has been applied as a patina and if left exposed will develop further. To prevent this a wax coating has been applied.

Internally the surface is pure brass which will naturally develop its own patina over time. The original finish can be restored if required.

### **CLEANING**

- Hand wash only with PH neutral washing up liquid.

### **TO RE-APPLY EXTERNAL WAX**

- Use a food safe wax polish.
- Apply liberally and polish with a lint free cloth.

### **TO RESTORE INTERNAL FINISH**

- Make a 10:1 vinegar/salt solution.
- Rub onto the brass with a lint free cloth.
- Rinse with fresh water.
