

# LIND DNA RECYCLED LEATHER

The bedrock of most of our designs is OEKO-TEX® certified, recycled leather. Sourced from the surplus production from the furniture and fashion industry, the vegetable-tanned core leather is first granulated, and then pressed together with natural rubber from trees. The result is a recycled leather quality, consisting of 80% core leather and 20% natural rubber – a material that is at once incredibly durable, water resistant as well as easy to clean. Lastly, the recycled leather is dyed with water-based colour and embossed with beautiful surface structures and patterns.

At LIND DNA, you can choose from a wealth of beautiful colours, shapes and structures. Earthy, subdued hues form the foundation of our colour scheme, which includes a few accent colours calibrated to fit in yet stand out, thereby offering something for any home and interior style.

# CARE GUIDE FOR RECYCLED LEATHER

Like most natural materials, our recycled leather needs some loving care and maintenance to ensure its long-lasting appeal year after year. A few simple tips will help preserve the recycled leather's natural beauty.

- Clean your product with a damp cloth and LIND DNA's cleaning spray, CLEAN&CARE.
- Do not put your products in the dishwasher and do not soak your products in water or soap.
- Avoid staining from certain foods and liquids such as spices (e.g. paprika, saffron or curry), chili and red wine, as they may leave permanent stains, especially on lighter colours.
- Avoid placing hot items such as pots and frying pans on your products.
- Do not fold your recycled leather products.
- We recommend that you always place your products on dry and plain surfaces. Be careful with oil-treated tables as excess oil might be absorbed by your recycled leather product.
- Avoid exposure to direct sunlight for longer periods of time.
